

Adobe Modern Workplace – The Key for Hybrid Work

The Status Quo

Today's workplaces need modern solutions that are aligned to equip teams with the tools to work and collaborate across an organisation. In hybrid working environments, where knowledge workers frequently engage remotely, access to a consistent and connected, secure infrastructure is key to maintaining and improving efficiency and productivity.

In most organisations, employees still struggle with common PDF tasks, such as updating existing documents, combining or organising documents, and completing and signing forms. In addition, there is an increased demand for higher quality and visual content, which leads to elevated requirements that are beyond simply creating basic presentations or online posts.

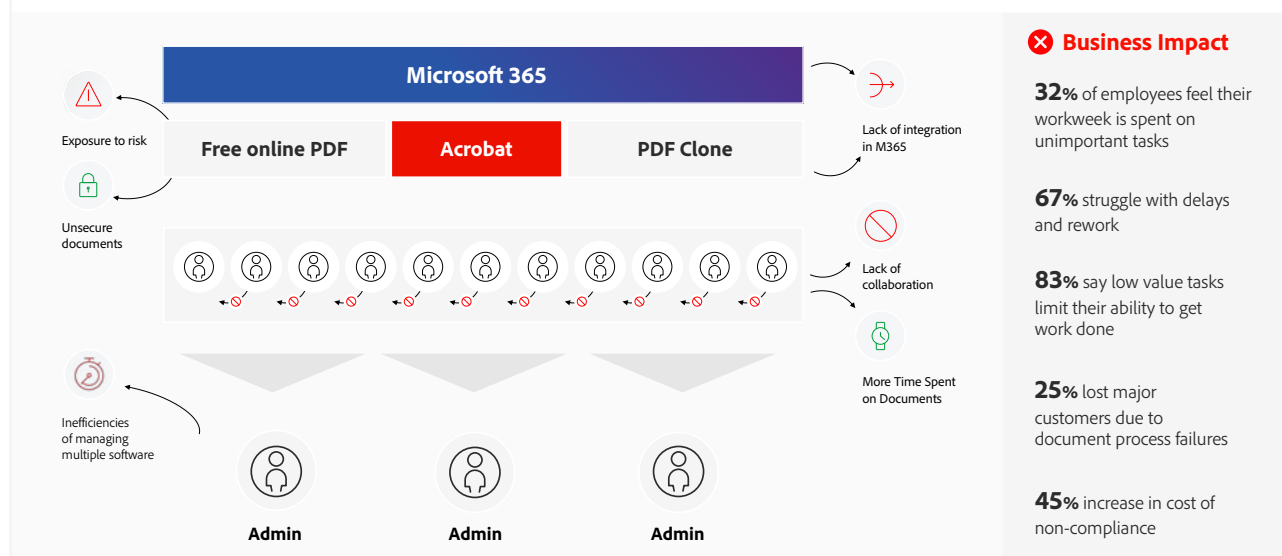

Adobe Modern Workplace – Integrate Your Workplace Investment

Enterprises still face disconnected environments, and digital collaboration is often inefficient and insecure. With many enterprises investing in Microsoft 365 to enable their employees to work digitally, Adobe Modern Workplace is the perfect solution to fill the workflow gaps. In order to allow employees to work on and sign digital documents, grant access to digital assets or enable departments to integrate low-code automation, Adobe Modern Workplace includes best-in-class solutions that fit the Microsoft 365 suite.

Unlock the full potential of digital transformation for the Modern Workplace in your organisation by supporting individual productivity through a modern infrastructure and an integrated ecosystem, combined with process automation that empowers enterprise productivity.

Inefficiencies of Disconnected Tech – example PDF.

Individual Productivity

Everyone within an enterprise plays a part in creating meaningful customer experiences that effectively engage their audiences: from creative pros to business communicators who create sales tools, presentations and reports that impact your brand.

Enterprise Productivity

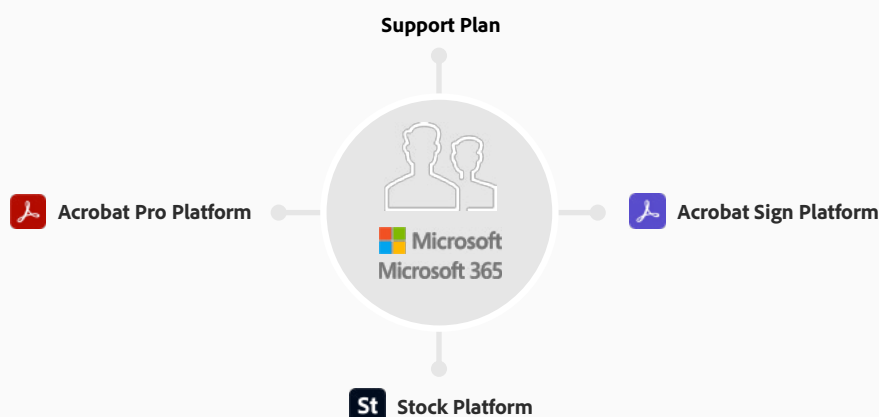

Organisations can leverage robotic process automation (RPA), low-code process automation and custom app creation to improve operational efficiency and productivity at scale, for example by introducing APIs to improve the accessibility of documents. Adobe's cloud-native, digital document services integrate with existing first-party and third-party solutions to create, optimise, protect, re-use, publish and more.

The Adobe Modern Workplace for Enterprise Offering

With Adobe Modern Workplace for Enterprise, organisations can maximise their investment in Microsoft 365 solutions for individual workers by leveraging access to Acrobat Pro, Acrobat Sign, Stock assets (images, templates, videos), PDF Services APIs and support.

Adobe Modern Workplace for Enterprise

Standard bundle for all knowledge-workers to complete the Microsoft 365 approach.

The Adobe Advantage

Implementing Adobe Modern Workplace offers a number of benefits, including:

- **Sustainability & accessibility:** Adobe Modern Workplace focuses on your sustainability and social governance, e.g. reducing the need for outdated paper-based processes (calculate your carbon footprint and possible resource savings [here](#)). In order to comply with the European Accessibility Act, enterprises are eager to create an environment that allows everyone to access PDFs and enjoy a great user experience, including those who rely on assistive technologies for reading documents. More information on making PDFs accessible to all you can find [here](#).
- **Employee & customer experience:** Thirty-two percent believe their workweek is spent on unimportant tasks like managing files, filling in forms and chasing signatures ([Future of Time study 2021](#)). Improve customer and employee satisfaction with seamless document workflows in familiar apps like Microsoft 365.
- **Trust & compliance:** Invest in Adobe Modern Workplace to enable your organisation to secure documents in the best way possible and mitigate the risk of non-compliance or content misuse. Solutions provided by Adobe comply with many industry standards. Further information can be found [here](#).
