

# 5

## Reasons Proofpoint is the best API-Based Email Security for Microsoft 365

While Microsoft 365 provides some native defenses, today's threats require a layered approach. New techniques used in phishing, business email compromise (BEC) and ransomware prey on human-behavior to slip past traditional security tools and target your people.

Quickly enable seamless protection by enhancing Microsoft 365 with Proofpoint's API-deployed email security.

Our AI-powered detection stops **45%+** more email threats than Microsoft alone.

### 01 Secure your Microsoft environment with ease

Stop

**45%**

more attacks than native security tools

### 02 Stop the widest variety of threats

Block

**99.99%**

of human-targeted email threats

### 03 Get the best user experience

Deploy via API in

**10**

clicks or less—with no downtime or disruptions

### 04 Realize your most efficient security operations

Remediate threats across your organization in as little as

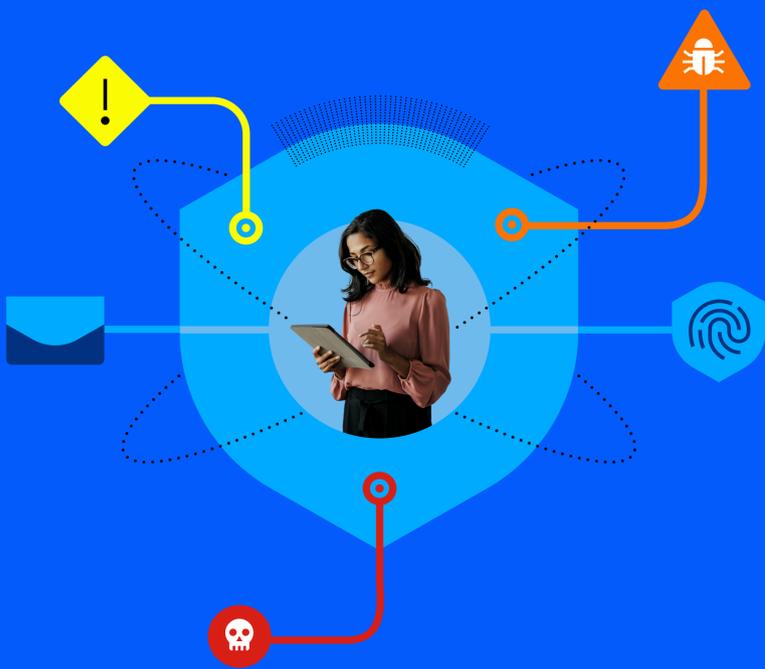

**0.1 seconds**

### 05 Work with an industry leader

**83**

of Fortune 100 companies augment their Microsoft environments with Proofpoint

### Why it matters

Organizations rely on Microsoft 365 and attackers know it. As threats grow in both volume and sophistication, native tools aren't enough.

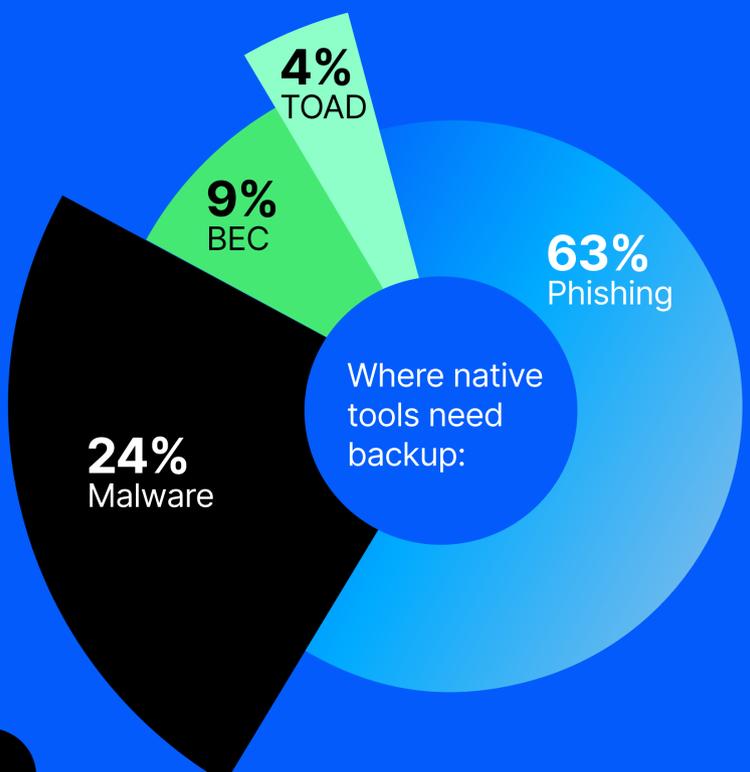

Proofpoint fills the critical gap with API-based protection that delivers instant security improvements without slowing down business.

### What native tools fail to block

Malicious email volume is up

**45.8%**

year-on-year.
